

WE ARE HIRING!

FRESH
Catch of the Day

Our vision is to produce fresh fish and seafood regionally, sustainably and in a manner that respects animal welfare, thus securing part of our food supply for the future.

FRESH is the world's first urban seafood farm far from and independent of the ocean. We produce premium, high quality Yellowtail Kingfish and White Tiger Shrimp in our Recirculating Aquaculture Systems (RAS). As RAS is a promising, beneficial, but relatively new production method, our focus is on further development and optimization of our technology and methods.

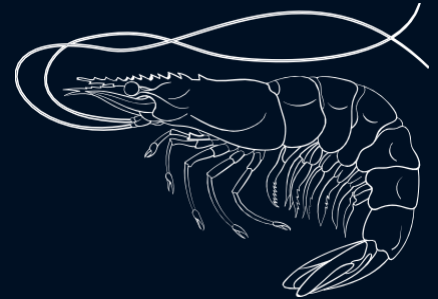

To expand and strengthen our interdisciplinary team, we are looking for dedicated people like you!
